

# Lamuzin LA

## Injectable Solution

20% Oxytetracycline

### Definition:

It is a clear yellow-brown coloured injectable solution which includes oxytetracycline and has long term effectivity.

### Composition:

Each ml contains 200 mg oxytetracycline base (as dihydrate).

### Indications:

Lamuzin LA is indicated in the treatment of infections caused by susceptible bacteria, which are sensitive to oxytetracycline, in cattle and sheep.

- Respiratory diseases (*P.haemolytica*, *P.multocida*),
  - Hemorrhagic septisemia (*P.multocida*),
- Contagious foot infection (*Fusobacterium necrophorum*, *Bacteriodes nodosus*),
  - Ceratoconjunctivitis (*Moraxella bovis*)
- Ovine enzootic abortion (*Chlamydia psittaci*)
  - Anaplasmosis
- Secunder bacterial complications of viral infections
- As a supporter on metritis and other genital system infections.

### Dosage and administration:

Administered deep intramuscularly (IM) and dosage is 20 mg oxytetracycline / kg live weight.  
If it is needed the dosage can be administered again after 3 days.  
Practically; 1 ml Lamuzin LA / 10 kg live weight can be administered.  
It musn't apply on the same injection area if the dosage is over 5 ml for sheep, 20 ml for cattle.  
Must be careful about antisepsis. It should never be administered thorough the intravenously (IV) route.

### Packing:

50 and 100 ml glass vials in cardboard box.
