

Onduran

Soluble Powder

Anti-diarrhoeal Combination

Definition:

It is an anti- diarrhoeal oral powder with wide spectrum.

Composition:

Each gram contains:
Oxytetracycline (HCl) 150 mg
Neomycin sulphate 100 mg
Pectin 100 mg
Bismuth subnitrate 500 mg

Indications:

Onduran is effective in the treatment of diarrhoea, which is caused by bacteria, in calves and lambs that rumen activity haven't started yet.

Dosage and administration:

Amount of Onduran is regulated according to oxytetracycline. The pharmacological oral dosage of oxytetracycline for lambs and calves is 10-20 mg/live living weight/day. Treatment should be continued 3-5 days dividing the dosage into two and administering twice a day. In practice the dosage for a lamb is 0.5 – 1.25 g and for a calve is 3 - 5 g. Powder should be dissolved in clean drinking water and administered orally. Avoid from dissolving into milk.

Packing:

Glass bottles containing 20 g in cardboard box and plastic jars containing 100 g in cardboard box.
